# UX DESIGNING SKETCH

User researcher: Ishwari Hakari

Home Screen

Iteration 1

What it is about?

The home screen contains search icon, name of the app, menu button. The user could be able to search the location to find the EV (electric vehicle) fast charging station. And a map displayed on the screen, with the indication of stations on the location.

Actions for users to take.

Users can decide which action they are interested in. They can either choose to search EV fast charging station, they can check the price, or they can check the availability of the station.

Home Screen

Iteration 2

Design principle(s) applied

Our past experience shapes our expectations.

The users would have access to view his/her:

- Trip history.
- Charging fees.
- Reviews from charging stations.
- Sort charging stations based on the prices.
